

2020 OUTCOMES REPORT

STEAMBOAT
ORTHOPAEDIC
& SPINE INSTITUTE

Navigating Orthopaedic and Spine surgery without assistance can be overwhelming. Many people have friends and family members with variable outcomes after surgery and it can be difficult to make sense of these differences. The providers at Steamboat Orthopaedic and Spine Institute believe that total transparency in surgical outcomes is the patient's right. Dr. Devin has been a leader in developing a national database to provide patients with transparency surrounding their surgical care. We collect data on patient satisfaction, pain, function, and complication rates on all of our surgical patients with at least a 98% follow-up rate at one year. This means we track nearly all patients, and our statistics are a true reflection of surgical quality. This is information that we are proud to provide to patients and referring providers. The graphs included in this brochure demonstrate that patients have significant improvement in physical function, social participation, and reduction in pain following surgery. Furthermore, over 85% of patients are completely satisfied with their outcome, exceeding the benchmark at elite medical centers. Lastly, we have made a significant effort to help patients achieve opioid independence following surgery. With our protocol we have had an unprecedented ability of helping patients reach this goal.

Steamboat Orthopaedic and Spine Institute understands that not every patient is at the point of requiring surgery. This is why we utilize all non-operative options prior to considering surgical intervention. Many patients simply want to understand the source of their pain, and would like a thorough diagnostic evaluation, along with education, regarding their diagnosis and treatment options. We take the time to make sure patients understand their options.

Our team is honored and humbled to provide quality comprehensive orthopaedic and spine care for patients in Northern Colorado and Southern Wyoming. We are excited to provide subspecialized care in our state-of-the-art clinic, imaging and surgery center. There are few ailments that create more disability than musculoskeletal pain, and we are here to assist you. Please call 970-879-6663 or fax 970-871-1234 for appointments or referrals.

2020 OUTCOMES REPORT

SPINE DESCRIPTIVE

Patient Data Collected Since 2018

SPINE | 3 Month Follow-up Rate

SPINE | 12 Month Follow-up Rate

SPINE | Primary and Revision Surgery

SPINE | Anatomical Region

SPINE OUTCOMES

SPINE | Extremity Pain (Leg or Arm Pain)

SPINE | Axial Pain (Back or Neck Pain)

SPINE | Percent of Patients Achieving Clinically Meaningful Improvement After Surgery

SPINE OUTCOMES

SPINE | Ability to Participate in Social Activities

SPINE | Physical Disability (ODI/NDI)

SPINE | Physical Performance

SPINE | Satisfaction with Surgery

SPINE | How Soon do Patients Return to Work?

National Benchmark ~ 67% of patient return to work at 90 days

SPINE | Percent of Patients Reporting Their Expectations Were Met

SPINE | What Percent of Patients are Taking Narcotic Pain Medicine After Surgery?

JOINT DESCRIPTIVE

Patient Data Collected Since 2019

JOINT | 3 Month Follow-up Rate

JOINT | 12 Month Follow-up Rate

JOINT | Primary and Revision Surgery

JOINT | Anatomical Region

JOINT OUTCOMES

JOINT | Hip Pain

JOINT | Knee Pain

JOINT | Hip Score

Higher scores indicate patient is doing better

JOINT | Knee Score

Higher scores indicate patient is doing better

JOINT OUTCOMES

JOINT | Physical Performance

JOINT | Ability to Participate in Social Activities

JOINT | Satisfaction with Surgery

JOINT | Percent of Patients Achieving Clinically Meaningful Improvement After Surgery

JOINT | How Soon Do Patients Return to Work?

JOINT | Percent of Patients Reporting Their Expectations Were Met

JOINT | What Percent of Patients are Taking Narcotic Pain Medicine After Surgery?
